# Enjoy an Easier Life with
# SeceuroGlide & Somfy

With Home Automation you can put yourself in control of securing your world, even when you are miles away from home.

### A Smart Way of Living

Monitor and operate lights, home surveillance and garage doors with your smartphone or tablet, for great peace of mind from anywhere in the world.

### Personal to You

With the bespoke style of your SeceuroGlide garage door, you can adjust everything about the Home Automation system to accommodate your personal preferences.

### Convenient from the Beginning

Your customers will be able to secure their home with the touch of a button via Somfy Connexoon, and if they upgrade to a Somfy TaHoma hub they can add extras in the future, such as surveillance cameras, motion detectors and climate control.

### Which system is for me?

Connexoon is a home automation starter kit which can control your garage door and fulfil basic commands.

TaHoma is a fully integrated home automation system, enabling you to take full control of your garage, blinds, lighting, heating and security system.

*Smart living starts with SWS UK and Home Automation.*

Our indoor and outdoor cameras can be used as a standalone product within the Somfy Protect app, or the Indoor camera can be used in conjunction with TaHoma.

# Home Automation Starter Kit

**①** ## Connecting Your World

It's not just your garage door you can control remotely, link your Connexoon Access RTS to your gate, outdoor lights and Philips Hue Lighting for a truly smart way of life.

**②** ## Welcome Home

Use the GeoLocation technology to turn your lights on and open your garage door ready for when you arrive home. You get to choose when the door opens – whether that's when you leave the office or pull into your street*.

**③** ## Tailor to Your Lifestyle

Whether you would rather have a schedule for your Smart Home based on time of day or your current mood, Connexoon lets you have it all. Create different scenarios to tell your home what to do when you leave (turn indoor lights off and outdoor lights on) or ask Amazon Alexa to open your garage door if you fancy an impromptu drive.
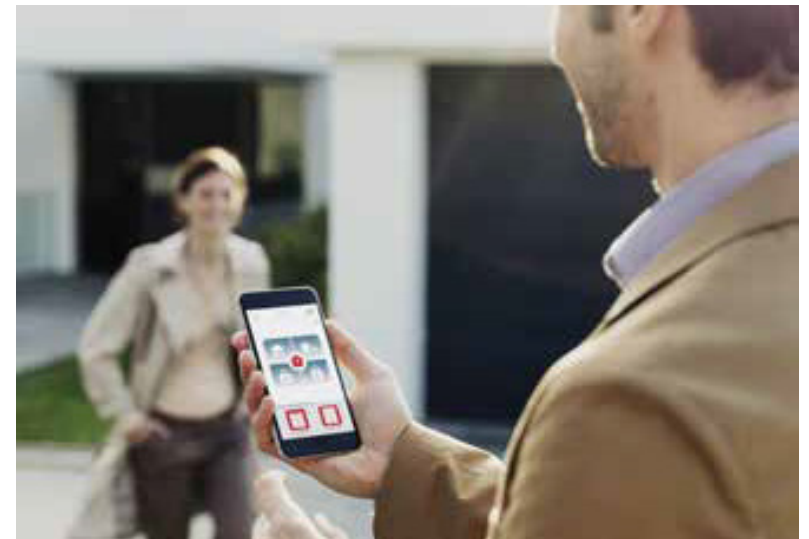

**④** ## Stay Secure While You're Away

Use the App to check that your garage door is securely locked, whether any movement has been detected on your home surveillance, and indoor lights are turned on at certain times in the evening to deter would-be intruders.

**⑤** ## Easy To Use

Simply connect the Connexoon Access RTS to your home WiFi router, install the app on your smartphone, and control your smart home and garage door from wherever you are in the world. Your youngest has forgotten his house keys? The postman wants to leave a parcel? Relax! Now, you can open your garage door remotely from your smartphone.

*Geofence range between 50 m and 250 m*

## Blinds & Shutters

Control your lights, blinds and curtains via the Connexoon Window RTS app.

## Lighting

Turn lights on and off at certain times of the day or dim your Philips Hue lighting.

## Garage Doors & Gates

Operate your rolling garage door from your mobile or set GeoLocation* to open the door when you arrive home.

*Geofence range between 50 m and 250 m*

## Connexoon

# Fully Integrated Home Automation

# TaHoma

## 1 Even More Connected

With the TaHoma interface, you have even more control of your environment wherever you are. More than just security features, TaHoma allows you added control of blinds, curtains, heating and electrical equipment, as well as all the benefits that come with having a Connexoon.

## 2 Add Technology As Your Lifestyle Changes

You may just want to automate your garage at this moment in time, but TaHoma allows you to add new features as and when you need. If you envision a future where your curtains and blinds open at a certain time in the morning to help you wake up for work, TaHoma allows you to add these comforts when you're ready.

## 3 Even More Security While You're Away

With TaHoma, you can access a real-time display of the status of your home; from whether your front door is unlocked, to whether your heating is turned off. You can also check that your garage door is securely locked, whether any movement has been detected on your home surveillance*, and programme indoor lights to turn on at certain times.

## 4 More than Another Pair of Eyes and Ears

You can combine different scenarios with sensors to adjust your smart home based on your environment. If it gets too warm, the heating can be programmed to turn off; if the sunlight streams in through the window, your blinds can automatically close. More than another pair of eyes and ears checking for would-be intruders, TaHoma enables you to live in complete comfort.

## 5 Easy To Use

Simply connect TaHoma to your home WiFi router, install the app on your smartphone, and control your smart home and garage door from wherever you are in the world.

*Starts at £3.99 monthly subscription for storing video history. Also available with the Somfy Protect app.

## Blinds & Curtains

Link motion detectors to your lights, blinds and curtains to activate when you leave or arrive home.

## Climate Control

Set timing programs and control temperature via the app wherever you are.

## Lights & Switches

Control all your lighting and lamps via remote, voice, sensors or timers.

## Garage Doors

Operate your garage door from mobile, tablet or computer and link with outside lights and garage lights.

## Eyes & Ears

See what's going on in real-time with indoor and outdoor surveillance cameras*.

## Voice Control

Interact with TaHoma by voice through your Amazon Alexa.

## Alarm System

Set up movement detectors and sirens for protection against intruders.

## Gates

Operate your gates at the touch of a button from your mobile, tablet or computer.
